

PineForge Corpus Validation Report

PineForge Corpus Validation Report

Generated: 2026-06-29 (UTC) — engine 02c7564, corpus 7aefa98

All probes live under corpus/validation/; categories below are derived from each slug's leading hyphen-token (e.g. ta-..., composite-...).

Headline

- Total probes verified: 252
- Excellent: 251 (99.6%)
- Strong: 0
- Moderate: 0
- Weak: 0
- Minimal: 0
- Anomaly (TV-side, expected): 1
- Engine-only by design: 0
- Missing: 0

Anomalies & Non-Excellent

Each row points at a probe under corpus/validation/; rationale is captured in the probe's inputs.json notes field where present.

Tier	Probe	TV	Eng	Count Δ	PnL p90	Reason
anomaly	anomaly-equity-mirror-strategy-equity-01	24	25	4.0000%	2.3202%	TV broker margin-boundary non-determinism at the exact 1x equity boundary (>=95% confidence, deep-analyzed). Engine is deterministic and CORRECT per Pine semantics; TV admits some over-equity entries and rejects some under-equity ones non-monotonically. Cannot be made to match TV without replicating TV's broker bug. See pineforge-utils/parity-anomalies/tv-margin-boundary.md and corpus/validation_report.md headline. Sibling probes (parity-probe-04/05/06) that leave any meaningful headroom below 100% equity match perfectly; only this 1.0x-pinned probe surfaces the boundary divergence.

Per-Category Summary

Category	Total	Excellent	Strong	Moderate	Weak	Minimal	Anomaly	Engine-only

Per-Strategy Detail

Sorted by category, then slug. count Δ is |tv-eng|/max(tv,eng); entry/exit/pnl p90 are 90th-percentile relative deltas across matched trades (PnL excludes scratch trades with |tv_pnl| < \$0.01).
